ALLEVYN Gentle & ALLEVYN Gentle Border

When choosing a foam dressing, superior fluid management is important for healing outcomes and patient comfort. The advantages of using ALLEVYN Gentle and ALLEVYN Gentle Border are:

- ✓ Reduction of the risk of maceration and further wound breakdown
- ✓ Increased confidence that the dressing will perform as intended between dressing changes
- ✓ Improved quality of life for your patient
- ✓ Enhanced protection of the patient's healthy skin
- ✓ Pain free dressing changes

Fluid handling measures more than just absorbency. It measures how much fluid a dressing can manage in practice.

The graph above provides an overview of some of the leading foam dressings. ALLEVYN is shown to be the most effective when considering fluid handling, which is measured by the moisture vapour transmission rate and ability of the foam to absorb fluid.
